Clay Hinson - Digital Technology Developer Manager

"Working with Juan on CalHEERs has been a pleasure. He is always cheerful, ready to help and looking for ways to improve. I have seen him progress quickly over the months he has been working on this project, and is becoming one of our most valuable developers.

CalHEERs is an extremely complex project, and he has learned the details of this project very rapidly and has already been able to help train new developers that have joined the project since. His consistently positive attitude and willingness to adapt are important strengths to have on this project, and he has demonstrated both consistently.

I also appreciate his diligence in examining the visual and technical documentation and annotating how these work together, to guide his work. "

Anna Ownes - Program/Project Mgmt Associate Manager

"Juan began working on the CalHEERs project in May, and has been an important part of the team from the start. It was great to see how quickly he got up to speed and was able to start contributing to our work. He was able to jump into a project that was already underway, and help support the development team to keep moving forward under our tight deadlines. This application is very complex, both in the business rules/flow - as well as the development language.

Juan brought his knowledge of React to the project, and has quickly become a key team member with our Fjord family. He has such a positive attitude and has been a great collaborator, despite the tight timelines and stressful nature of the project. He is a team player - always being flexible and willing to travel to Austin when requested, to help support our team. He has shown to me that he wants to give 100% to his work, and takes accountability for its success. It has been a pleasure to work with Juan on CalHEERs - and am looking forward to the future of the project with him on the team! "

Benjamin Leffler - Content Design Associate Manager

"Since joining the CalHEERS project, Juan has been extremely positive and a great communicator. He asks good questions and resolves issues in real time. Juan often points out inconsistencies and shortcomings in my documentation, which has forced me to rethink deliverables to better serve the development team. Juan is particularly helpful when he is on on-site in Austin, as he very collaborative and often helps us work through complex issues before they become defects.

As Juan continues to work with our team, it would be great if he would provide additional insight about how design can better serve development -- how deliverables could be improved, streamlining our process, etc.
